

Inventory Management System

Companies often use inventory management software to reduce their carrying costs. The software is used to track products and parts as they are transported from a vendor to a warehouse, between warehouses, and finally to a retail location or directly to a customer. Inventory management software is used for a variety of purposes, including:

1. Maintaining a balance between too much and too little inventory.
2. Managing Sales and Purchase orders
3. Setting Min and Max quantity threshold for items.

Expected System:

Administrator:

View inventory details.

Ability to Set the Min and Max threshold for inventory items.

Staff:

View Ware-house and available inventory

View inventory details [Read only]

Generate purchase order and sales order

Add new inventory items
